Scholar'd for Life, the library's popular lecture series in partnership with the UW-Madison Speakers Bureau, kicks off our 2019 series with a lecture by renowned folklorist Jim Leary. A professor emeritus who has spent decades studying the folk traditions of the upper-Midwest, Leary will present a multi-media lecture surveying the vibrant yet largely neglected folk/ethnic/roots music of diverse peoples in Wisconsin and the Upper Midwest and what that tradition tells us about the American experience. Copies of Professor Leary's recent book, *Folksongs from Another America*, will be available for sale courtesy of Mystery to Me bookstore.

Project Home presents How to Prevent Basement Flooding Wednesday, April 10th, 6:30 PM

Ever had water in your basement? Whether it occurs frequently or only during extreme weather conditions (like last summer), in most cases it can be avoided. Over the past 6 years, the experts at Project Home have corrected water runoff issues for numerous homeowners and they want to share this information with you! With

a little bit of planning, a few rules, and some basic landscaping tools, this is a problem most homeowners can address on their own. No large machinery required!

Scholar'd for Life Lecture Series: R. Alta Charo, UW-Madison Law Professor "Human Genome Editing: Policy and Politics" Thursday, April 18th, 7:00 PM

In the second lecture in our ongoing Scholar'd for Life series in partnership with the UW-Madison Speakers Bureau, R. Alta Charo, Warren P. Knowles Professor of Law and Bioethics at UW-Madison's Law School, will present a lecture entitled "Human Genome Editing: Policy and Politics".

Genome editing makes genetic engineering cheaper, easier, and more precise. It can be used to delete, alter or add a genetic trait and is just now entering clinical trials for treatment of a few human diseases. Its powerful potential for preventing and treating disease has, however, also raised questions about its potential uses for enhancing otherwise already healthy human traits, or even more dramatically, making changes in eggs, sperm and embryos that would affect not only our children but our descendants. This talk will briefly describe the technology, its current and near-term uses for human health, and the surrounding policy and politics.
